Defibrillators for public facilities and homes

Our team welcomes enquiries from institutions equipping public facilities and from families considering an automated external defibrillator (AED) for their home. We can quote for a device, matching accessories and ongoing technical support.

Choosing a device for the setting

For markets, schools, sports complexes and offices, a quotation can include signage and cabinets for indoor or outdoor use. For a family home, we can compare models intended for home use, their storage requirements and the cost of replacement pads and batteries.

Device familiarisation at handover

We can include a matching training unit and reusable training pads when requested. At handover, our team can identify the parts supplied, explain the device status indicator and show where to find the manufacturer's instructions.

Servicing and replacement parts

The proposal can list the part numbers for pads and batteries, warranty terms and available servicing. Keeping the model number, serial number, expiry dates and supplier contact together makes it easier to order compatible replacements.

Request a quotation

Tell our team whether the device is for a family home or public facility, how many units you need, your country and delivery location. If you already have an AED, include its make and model so we can check accessory compatibility.
